

The A8 offers integral passenger protection in the form of the new Audi pre sense safety system.

It is available from three optional advanced levels: - Audi pre sense front

- Audi pre sense plus
- Audi pre sense rear.

They are tightly integrated with the optional driver assistance systems Audi adaptive cruise control with stop & go function and Audi side assist, making them more differentiated and more capable compared with the competition.

The new high-tech assistance systems help the person behind the wheel concentrate on the primary task – driving. These systems regulate the distance to the car ahead, help the driver to change lanes and stay in the lane, and assist with parking. They recognize speed limit signs and at night use infrared to look up to 300 meters ahead.

The most complex new system is Audi adaptive cruise control with stop & go.

It is active throughout the entire speed range from 0 to 250 km/h and works closely together with other driver assistance systems. It uses the data from 27 control units, with which it works to continuously analyze the complete surroundings of the A8 and compares the results almost immediately.

More information in a special Audi A8 report to be published in the next weeks at [www.DrivingVisionNews.com](http://www.DrivingVisionNews.com)
