

Around 280 visitors (from FIA, EU, governmental organizations, customer organizations, fleetowners and journalists) could inform themselves about eSafety devices. Warning and Emergency Braking system was one of them.

Warning and Emergency Braking System detects at an early stage the danger of a crash with the vehicle in front of you.

In the case of a potential collision, they warn you about the danger and when there is no reaction to the warning, the technologies activate the brakes together with systems such as seatbelt pretension to avoid or mitigate a crash.

Timo Glock, Formula 1 driver said:

“It is a great driver aid to have if you suddenly are forced to make an emergency braking. At first you get surprised by the reaction of the car but after the first experience you have the feeling that the car is more intelligent than normal cars and that it is kind of looking out for dangers ahead.”
