

Blind Spot Monitoring helps you avoid a crash with a vehicle in the lane next to you by continuously screening the blind spots to the side of your vehicle

Robert Kubica, Formula 1 driver said:

“Blind Spot Monitoring can support you in various traffic situations such as when you have an overtaking vehicle stuck in the blind spot as well as if two vehicles are converging into the same lane. It does not have an active reaction as some of the other systems we have seen now but it is still a useful support giving you an important warning.”
