

AutoExpress have awarded the Jaguar I-Pace as their Car of the Year. Jaguar's latest SUV beat the BMW i3 and the Tesla Model S to win the Premium Electric Car of the year category and then went on to take the overall title.

Jaguar's first effort at the electric vehicle market has made friends fast, with the I-Pace winning wide acclaim.

Ian Callum, Jaguar Director of Design, said his company "are delighted to pick up such a prestigious accolade for our first all-electric Jaguar. We started with a blank canvas and the goal of creating the world's most desirable electric vehicle and recognition like this from Auto Express shows that the I-Pace certainly meets that challenge. What I'm most proud of is that we have created a Jaguar first and foremost, a Jaguar that happens to be electric. The I-Pace has all of the stunning design cues, characteristics and breadth of dynamic capability that is inherent in our vehicles. It is the Jaguar of the future, here today."
