

Optronics, a US supplier of lighting devices for heavy-duty vehicles, have launched a new website featuring their also-new catalogue. The company say their new website and catalogue will make it easier to browse and learn about their product range of over 3,000 items—including more than 500 new items since the previous edition of the catalogue.

"Our new website provides users with a powerful new tool that will allow them to locate exactly the product they are looking for," said President and CEO Brett Johnson.

Optronics' Fusion LED combination lamps are among those now offered in a wider array of configurations, with numerous lens and connector options. The Fusion LED combination stop-tail-turn-reverse lamps use an optical bridge that helps project light from one area of the lens to others. 11 new LED warning lights and at least 20 new white LED lighting products are on offer, including headlamps, light bars, off-road lights, and utility lights.
