

Aftermarket LED Light Has Two Functions

Monday, 25 September 2017

Osram-Sylvania's new Cube-X aftermarket auxiliary light is a "two-in-one" item, say its makers: it provides a long-range spot beam intended for use off road, as well as on-road "accent lighting". In total, the emitters produce 1,800 raw lumens. Features include an aluminium body designed for optimal thermal conductivity and reverse polarity protection.
