

SCANNING LIDAR AS ENABLER FOR AUTOMATED VEHICLES

Joachim MATHES
Director R&D and Product Marketing
Valeo Driving Assistance Systems

AUTONOMOUS DRIVING IS COMING

„We are on the verge of jumping to Level 3,
which is our target for the next S class.“

Ole Kaellenius, Daimler

„Ich glaube, dass wir da ganz, ganz vorne
rauskommen und wir die ersten sind,
die das gut auf die Straße bringen.“

Harald Krüger, BMW

Our mission is to enable
fully autonomous mobility services
in urban environments by 2021.

Audi Investor Presentation

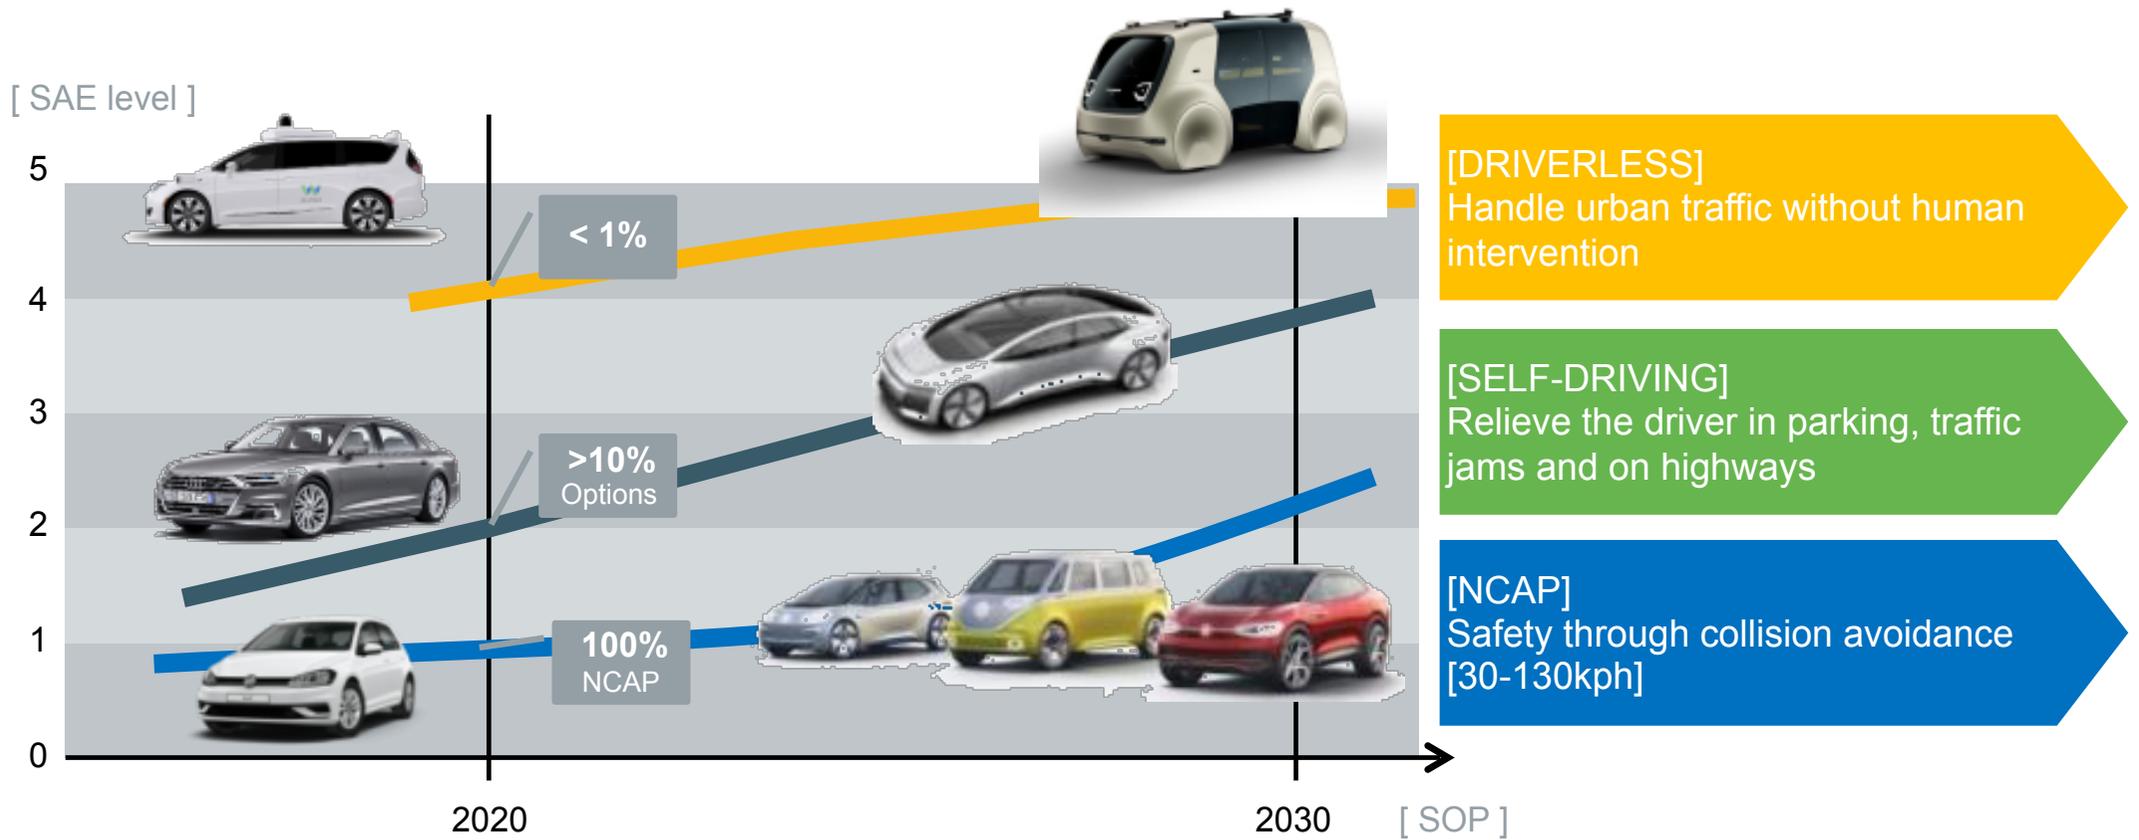

We are not in a race to be first
to offer self-driving vehicles to the public.
Our focus is on doing it correctly.

Ford Safety Assessment Report

GM plans to commercialize
an Autonomous Vehicle
from Cruise in 2019.

GM Press Release

AUTOMATED CARS ARE ON THE ROAD

SEGMENTS DRIVE TECHNICAL CHOICE

[NCAP]
Safety through collision avoidance

[SELF-DRIVING]
Relieve the driver in parking, traffic jams and on highways

[DRIVERLESS]
Handle urban traffic without human intervention

SCANNING LIDAR IS AN ENABLER FOR LEVEL 3

“The new A8 is the first production automobile to have been developed specially for highly automated driving (level 3). ... Audi is the first car manufacturer to use a laser scanner.”

Audi press release

► The new A7, A6 and Q8 also feature the laser scanner

VALEO SCALA® PRODUCT ROADMAP

SCALA® Gen. 1

2017

World's 1st

Automotive qualified

Large detection range with wide horizontal field of view

Launched in 2017

SCALA® Cocoon

2020

360° detection cocoon
Compiled of several SCALA®

Customer project

SCALA® Gen. 2

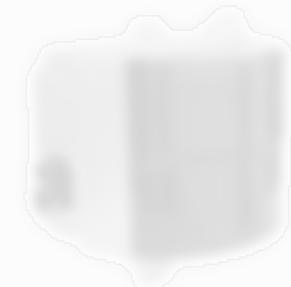

2020

Triple vertical field of view

Customer project

SCALA® Gen. 3

202x

Solid-state LiDAR

Customer project

SIGNIFICANT INVESTMENT – SUSTAINABLE ENGAGEMENT

2010 Start of laser scanner development at Valeo in cooperation with Ibeo: ***Develop a laser scanner that fully complies with fierce automotive specifications***

- ▶ Finding the right compromise between sensing performance, package size and cost
- ▶ Wide horizontal field of view with a high angular resolution combined with a large detection range
- ▶ Ability to „cleanly“ integrate the sensor into the vehicle body design
- ▶ Main challenge: Maintaining the required high mechanical precision over temperature and mechanical vibration/shock

2015 Start of an automotive qualified small volume production line

- ▶ Prototype production line in operation since 2013
- ▶ Over 5,000 SCALA® produced before market launch in Nov 2017
- ▶ Main challenge: Optical alignment with a μm accuracy that is unprecedented in the automotive industry

2017 Market debut of the world's first laser scanner compliant with the specifications for automotive volume production

SUMMARY: LIDAR A CORNERSTONE FOR AUTOMATED DRIVING

- ▶ **Active sensor, like radar – adding defined layers for elevation**
- ▶ **Optical sensor, like camera – adding capability to detect road marks**
- ▶ **New sensor generations provide camera-like pixels for classification – adding depth**
- ▶ **3D Point clouds ideal for localization**
- ▶ **Complementarity makes lidar the missing element in camera and radar fusion**

LIDAR AS KEY PILLAR IN VALEO'S PERCEPTION PORTFOLIO
