SOS LAB's Mission

0. Solid-state LiDAR

Solid-state LiDAR : Silver Bullet

Autonomous Vehicles and LIDAR: Why Solid State isn't a Silver Bullet

Raffi Mardirosian

Head of Corporate Development

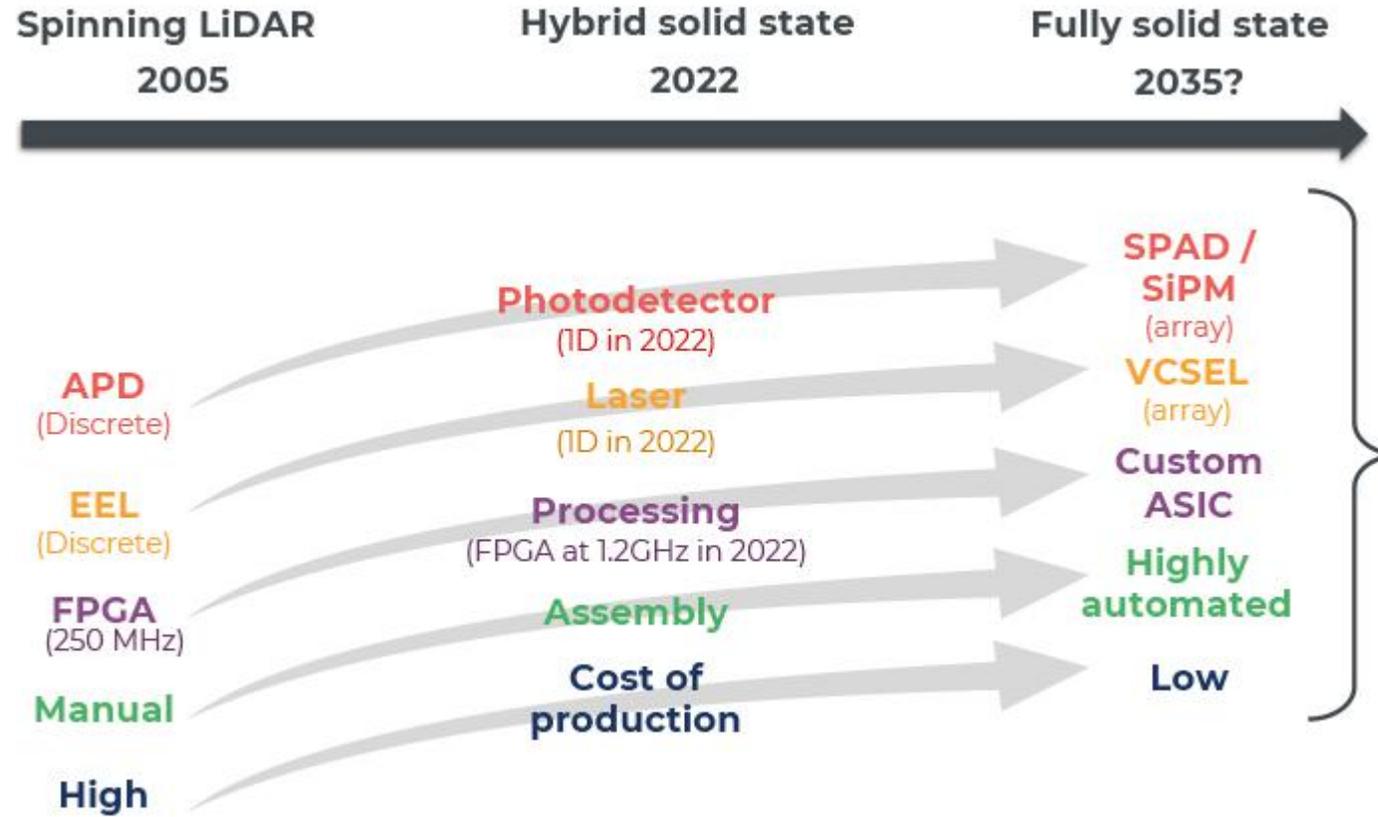

Ouster

Solid-state LIDAR has gained a reputation as a necessary component for autonomous vehicles, as compared to spinning and mechanical LIDAR. Solid-state is regarded as the more cost-effective, more robust, and automotive-grade alternative, ideal for mass production of consumer vehicles. However, this perception is based on comparisons against older mechanically spinning LIDAR technologies. Recently, companies have been innovating mechanically spinning LIDAR to achieve smaller form factor, lower cost, higher resolution, greater robustness, and mass production levels, while solid-state LIDAR continues to suffer from challenges ranging from production to resolution to reliability. In addition, most LIDAR sensors marketed as solid-state are in fact based on MEMS technologies, meaning there is still a moving micro-mirror component. This talk will discuss the factors and tradeoffs to consider when choosing LIDAR solutions, rather than the "solid-state" label, and why solid-state technology is not a near term solution for autonomous capabilities. The talk will also provide an overview of the leading companies providing each type of LIDAR, as well as a brief roadmap of technology development for mechanically spinning LIDAR in the near future.

Biography: Raffi Mardirosian is Head of Corporate Development at Ouster. Previously, he was VP, Corporate Development at MODO Fuels, pioneering the production of ultra-low carbon fuels, Principal at Flagship Ventures, where he focused on launching and investing in companies in sustainability and climate change, and President at Midori, a technology startup pioneering its breakthrough carbohydrate catalysis platform with impact across human nutrition, animal nutrition, and human therapeutics. Prior to Midori, Raffi developed renewable power projects in Africa, including creating the first utility-scale solar photovoltaic power plant in East Africa which currently contributes to over 6% of Rwanda's power and broke the record for fastest African energy project finance deal to reach financial close and interconnect.

SOS LAB's Mission

III. Low price and quality assurance

Low Price and Quality Assurance

- √ SL-corporation is one of the largest Tier-1 companies in South Korea
- √ They specialize in automotive lamps and sensors, which are their areas of strength.
- √ SL Corporation handles manufacturing and quality assurance for OEMs.
- √ Thanks to SL's superior purchasing power, 25% reduction in material cost.

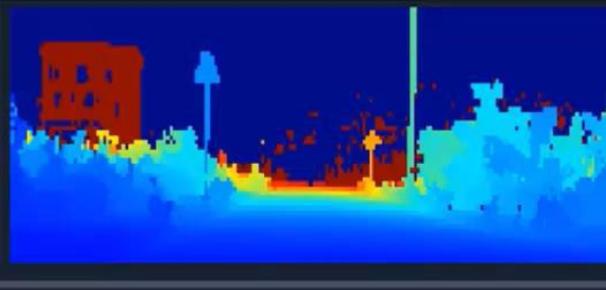

SOS LAB's Mission

VI. Providing comprehensive LiDAR solution

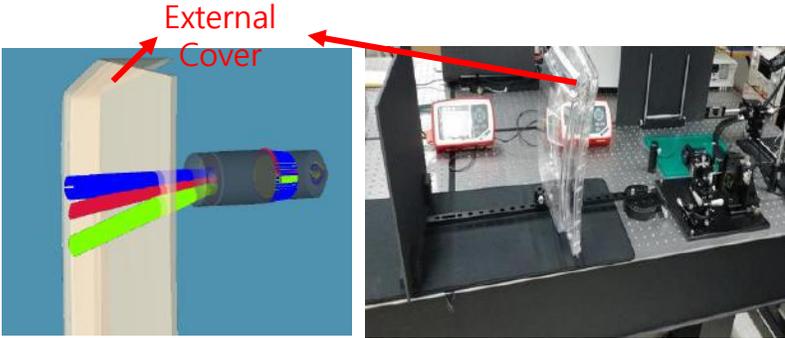

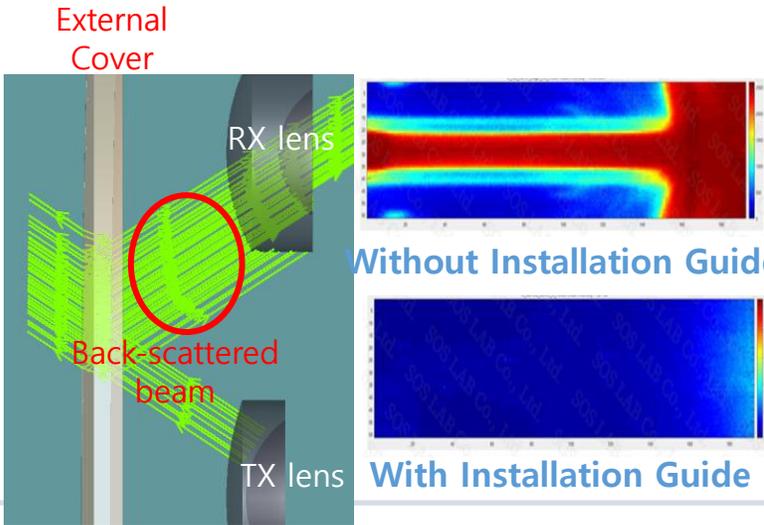

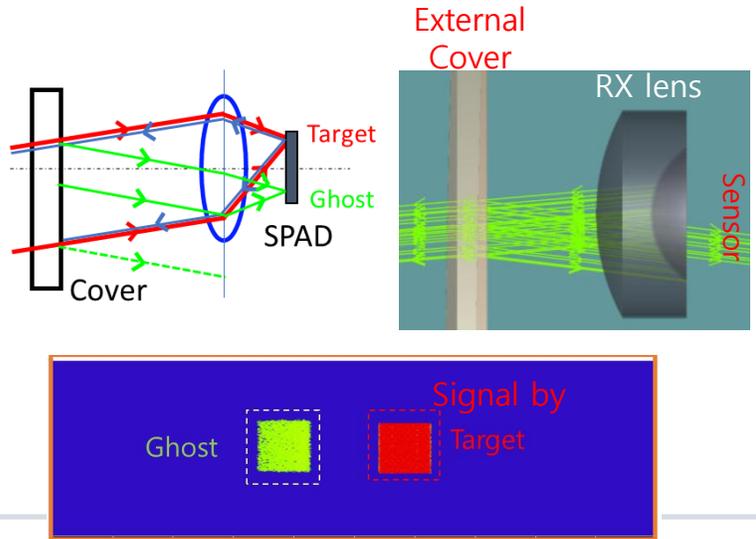

The background of the slide features a series of thin, parallel diagonal lines that create a sense of motion and depth. The color palette transitions from a deep, dark blue on the left to a vibrant, bright blue on the right, with a subtle purple hue in the middle. The lines are more densely packed and brighter in the lower right quadrant, fading into the dark background towards the top and left.
